Brainstorming & Idea Prioritization Template: Auto Ticket Classification using Flow Designer

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	4 Marks

Overview & Introduction

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions. Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before you collaborate (10 minutes)

A little bit of preparation goes a long way with this session. Here's what you need to do to get going:

• **Team gathering:** Define who should participate in the session and send an invite (e.g., School IT Helpdesk Staff, ServiceNow Developers, Project Leads). Share relevant information or pre-work ahead.

• **Set the goal:** Think about the problem you'll be focusing on solving in the brainstorming session—specifically, automating the daily triage of school IT incident requests like Wi-Fi issues, projector failures, password problems, and slow computers.

• **Learn how to use the facilitation tools:** Use the Facilitation Superpowers to run a happy and productive session.

Define your problem statement (5 minutes)

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm:

> **PROBLEM: How might we leverage ServiceNow Flow Designer to automatically analyze keywords in the short description and description fields of student and**

teacher incident requests (such as Wi-Fi issues, projector failures, and password problems) to replace manual review and streamline ticket routing?

Key rules of brainstorming

To run a smooth and productive session:
• Stay in topic
• Defer judgment
• Go for volume
• Encourage wild ideas
• Listen to others
• If possible, be visual

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorming ideas (10 minutes)

Write down any ideas that come to mind that address your problem statement.

Tip: You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

• **Amar:** Scan incoming text using Flow Designer string conditions to look for network and Wi-Fi keywords.
• **Yuktesh:** Create condition blocks specifically tailored to hardware failures like "projector", "screen", or "bulb".
• **Person 3:** Implement automated subcategory and priority assignment for password reset requests to speed up student access.
• **Person 4:** Build fallback routing logic to send ambiguous tickets back to the manual IT helpdesk queue if no clear keywords are matched.
• **Person 5:** Trigger automated email notifications to teachers confirming receipt and category assignment of their technical issue.
• **Person 6:** Track time-saved metrics on a custom dashboard to measure efficiency gains against manual IT review.

Group ideas (20 minutes)

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label.

Tip: Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

• **Cluster 1 (Keyword Parsing & Triggers):** Ideas focusing on scanning short description and description fields for Wi-Fi, projector, and password issues.
• **Cluster 2 (Routing & Fallbacks):** Ideas focusing on automated category mapping and fallback queues for unclassified tickets.

• **Cluster 3 (Notifications & Metrics):** Ideas focusing on update alerts for teachers/students and administrative reporting dashboards.

Step-3: Idea Prioritization

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible (20 minutes).

Feasibility / Complexity	Strategic Alignment & Impact
High Feasibility (Quick Wins)	Keyword-Based Category & Priority Automation Fallback Routing for Unmatched Incidents
Moderate / Low Feasibility	Automated Status Notifications & Metrics Dashboard

Tip: Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.
