Empathy Map Canvas: Auto Ticket Classification using Flow Designer

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	4 Marks

Empathy Map Canvas Overview

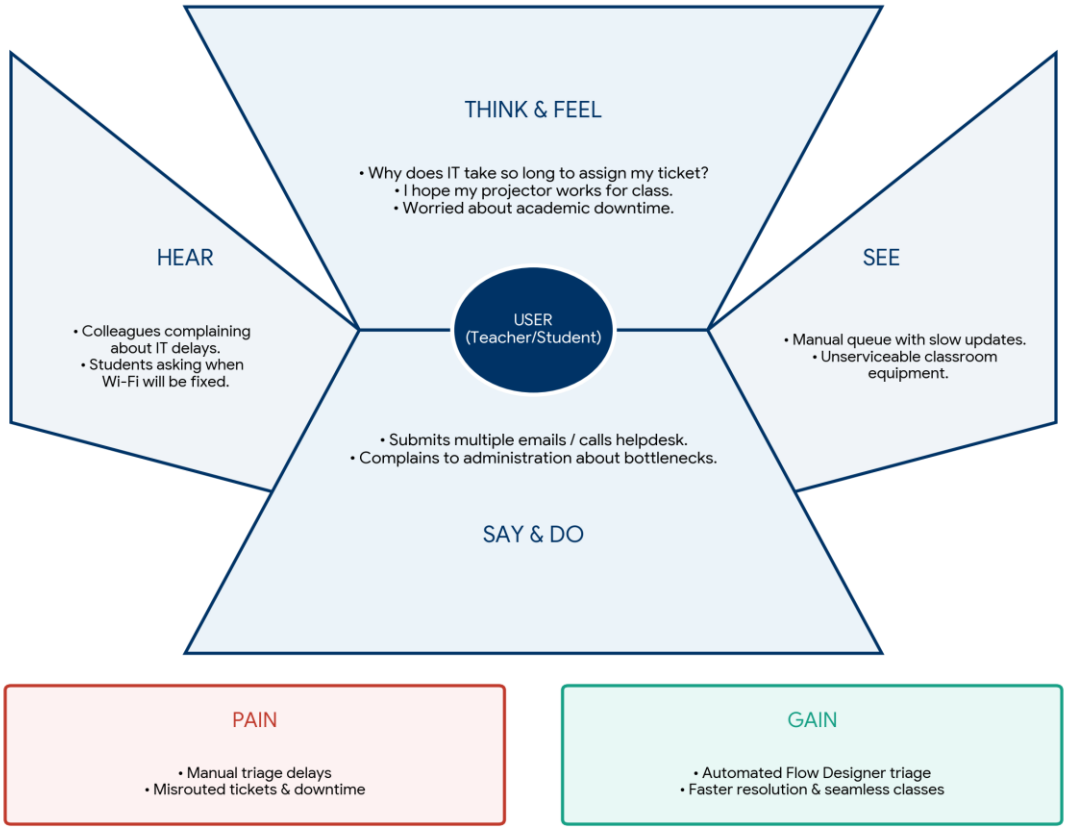

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Detailed Empathy Map Breakdown

1. What does he THINK AND FEEL?

- Why does it take so long for IT to assign my ticket?
- I hope my projector works for this lecture, or class will be disrupted.
- Will I miss my assignment deadline because my network account is locked?
- Worries about technical downtime interrupting academic schedules.

2. What does he HEAR?

- Colleagues complaining about delayed IT support responses.
- Students asking when the classroom Wi-Fi or portal will be fixed.
- IT helpdesk staff stating they are overwhelmed with manual ticket categorization.

3. What does he SEE?

• A manual and generic IT support ticketing queue with slow updates.
• Classroom equipment (projectors, computers) remaining unserviceable for hours.
• Peers struggling with password resets and slow computers during exams.

4. What does he SAY AND DO?

• Submits multiple emails or calls the helpdesk repeatedly for status updates.
• Complains to administration about recurring technology bottlenecks.
• Tries workaround solutions manually when technical help is delayed.

5. Pain (Fears, Frustrations, Obstacles)

• Manual ticket triage causes severe delays in resolving critical incidents like projector failures and Wi-Fi outages.
• Lack of automated categorization leads to misrouted requests and extended system downtime.
• Frustration with administrative paperwork and delayed responses.

6. Gain (Wants/Needs, Measures of Success)

• Instant automated ticket classification using Flow Designer based on short description and description keywords.
• Faster turnaround time for password resets, Wi-Fi fixes, and hardware support.
• Seamless learning and teaching experience with reliable IT infrastructure.
