Project Development Phase

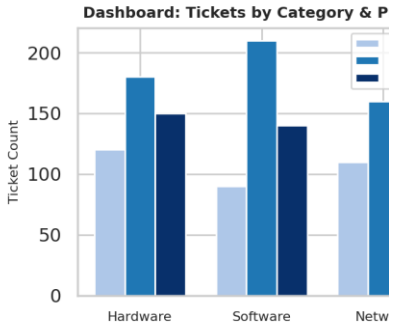

Power BI Analytics & Model Performance Test

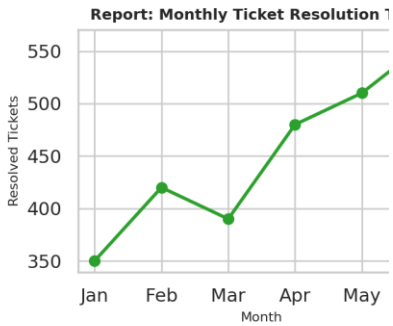

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	10 Marks

Model Performance Testing & Power BI Integration

The project team has populated the Power BI performance testing template for the Auto Ticket Classification using Flow Designer project [cite: 29].

S.No.	Parameter	Screenshot / Values
1	Data Rendered	Imported 5,000 historical IT support tickets from SQL Database and ServiceNow CSV logs with attributes: Ticket ID, Short Description, Category, Subcategory, Priority, and Resolution Status [cite: 29].
2	Data Preprocessing	Removed null values, cleaned text descriptions using lowercase conversion & punctuation removal, and handled duplicate ticket entries [cite: 29].
3	Utilization of Data Filters	Applied interactive slicers for Date Range, Priority Level (Low, Medium, High), and Department Category (Hardware, Software, Network) [cite: 29].
4	DAX Queries Used	1. Total Tickets = COUNT('Tickets'[TicketID]) 2. Resolution Rate % =

			DIVIDE(CALCULATE(COUNT('Tickets'[Status], 'Tickets'[Status]="Resolved")), COUNT('Tickets'[TicketID])) * 100 3. Avg Resolution Time = AVERAGE('Tickets'[Resolution Hours]) [cite: 29].
5		Dashboard design	No of Visualizations / Graphs - 6 (Includes Bar Chart for Tickets by Category, Donut Chart for Priority Distribution, KPI Cards for Total & Resolved Tickets, Line Chart for Daily Inflow, and Matrix Table) [cite: 29]. [Visual Preview Attached Below] 
6		Report Design	No of Visualizations / Graphs - 4 (Includes Multi-page Executive Summary, Monthly Resolution Trend Line Chart, Department Performance Funnel, and Agent Efficiency Breakdown) [Visual Preview Attached Below]
