Project Development Phase

Tableau Analytics Performance Test

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	10 Marks

Performance Testing (Tableau Analytics)

The project team has populated the Tableau performance testing template for the Auto Ticket Classification using Flow Designer project [cite: 38].

S.No.	Parameter	Screenshot / Values
1	Data Rendered	Connected to ServiceNow and SQL server databases, importing 5,000 IT ticket records containing attributes such as Ticket ID, Category, Priority, Resolution Time, and Status [cite: 38].
2	Data Preprocessing	Extracted date parts, created calculated groups for ticket categories, and filtered out null or incomplete service logs [cite: 38].
3	Utilization of Filters	Applied interactive global filters and context filters for Department Category, Priority Level, and Date Range [cite: 38].
4	Calculation fields Used	1. Resolution Efficiency = [Resolved Tickets] / [Total Tickets] * 100 2. Priority Weight = IF [Priority] = 'High' THEN 3

		ELSEIF [Priority] = 'Medium' THEN 2 ELSE 1 END 3. Days Open = DATEDIFF('day', [Created Date], [Resolved Date]) [cite: 38].
5	Dashboard design	No of Visualizations / Graphs - 4 (Includes Bar Chart for Resolved Tickets by Category, Donut Chart for Priority Distribution, KPI Summary Cards, and Trend Line Chart) [Visual Preview Attached Below]
6	Story Design	No of Visualizations / Graphs - 3 (Includes Quarterly Inflow Trend, Department Workload Distribution, and Resolution Efficiency Summary) [Visual Preview Attached Below]
