User Acceptance Testing (UAT) Report

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	10 Marks

Project Overview

Project Name: Auto Ticket Classification using Flow Designer [cite: 33]

Project Description: Automated IT support ticket routing and classification system leveraging machine learning classification models and Power Automate flow designers [cite: 33].

Project Version: v1.0.0 [cite: 33]

Testing Period: 30 September 2026 to 30 September2026 [cite: 33]

Testing Scope

Features and Functionalities Tested [cite: 33]:

- Automatic ticket ingestion from ServiceNow and SQL logs [cite: 33].
- ML-based ticket classification (Hardware, Software, Network categories) [cite: 33].
- Power Automate Flow Designer automated task routing [cite: 33].
- Power BI & Tableau interactive dashboard and reporting metrics [cite: 33].
- Salesforce CRM data import and validation [cite: 33].

Testing Environment

URL/Location: https://internal.autoticket-flow.enterprise.com / Staging Server [cite: 33]

Credentials (if required): Admin: uat_admin_07 / Pass: SecurePass@2026 [cite: 33]

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify automatic	1. Submit new ticket with	Ticket should be	Ticket classified as	Pass [cite: 33]

	ticket classification for incoming hardware requests [cite: 33].	text 'Printer cartridge replacement'. 2. Trigger Flow Designer. 3. Check assigned category [cite: 33].	successfully classified under 'Hardware' with >90% confidence score [cite: 33].	'Hardware' with 94.2% accuracy [cite: 33].	
TC-002	Verify Salesforce bulk data import validation [cite: 33].	1. Upload employee CSV data file. 2. Map 19 fields. 3. Click Start Import [cite: 33].	Records matching correctly should be created; unmapped fields flag errors [cite: 33].	19 fields mapped successfully and import completed [cite: 33].	Pass [cite: 33]
TC-003	Verify Power BI dashboard filters and DAX measures [cite: 33].	1. Open dashboard. 2. Apply priority filter 'High'. 3. Verify DAX resolution rate [cite: 33].	Dashboard should dynamically filter metrics and calculate resolution rates correctly [cite: 33].	Filters applied correctly and DAX calculations verified [cite: 33].	Pass [cite: 33]

Bug Tracking

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Minor delay in Power BI dashboard refresh upon bulk ticket insertion [cite: 33].	1. Insert 500 records via CSV. 2. Refresh Power BI dataset immediately	Low [cite: 33]	Closed [cite: 33]	Resolved by optimizing scheduled refresh intervals [cite: 33].

[cite: 33].

Sign-off & Notes

Tester Name: Team Lead – HELLEN ARSHA [cite: 33]

Date: 30 September 2026 [cite: 33]

Signature: [hellenarsha] [cite: 33]

Notes:
- Ensure that all test cases cover both positive and negative scenarios [cite: 33].
- Obtain sign-off from both the project manager and product owner before proceeding with deployment [cite: 33].
