Customer Journey Map - Auto Ticket Classification using Flow Designer

School IT Helpdesk Incident Management Journey (TEAM-07)

Date:	30 September 2026
Team ID:	SWTID-2026-3230
Project Name:	Auto Ticket Classification using Flow Designer
Target Persona:	School Teachers & Students / IT Support Staff

---

1. Entice (Discovery & Awareness)

• Stage Description: How students, teachers, and IT staff become aware of the automated helpdesk system.

• Steps: User experiences an IT issue (Wi-Fi drop, projector failure, password lockout, or slow PC) and hears about the new centralized school IT portal from an announcement.

• Interactions (People, Places, Things): Sees notice board or email circular; accesses portal via school web browser or mobile device.

• Goals & Motivations: 'Help me find an easy way to report my classroom tech issue without waiting in line.'

• Positive Moments: Clear digital signage and quick awareness of the new ticketing system.

• Negative Moments: Confusion regarding old manual email requests vs. new portal links.

• Areas of Opportunity: Send automated onboarding guides and quick-start links to all teachers and students.

2. Enter (Onboarding & Ticket Submission)

• Stage Description: What users experience as they begin the ticket creation process.

• Steps: User logs into the MERN web portal, clicks 'Create Ticket', and enters a short description (e.g., 'Projector lamp not turning on in Lab 3').

• Interactions (People, Places, Things): Interacts with React frontend form interface, enters text fields, and submits ticket.

• Goals & Motivations: 'Help me submit my incident details quickly with minimum effort.'

• Positive Moments: Clean, responsive React form with instant confirmation popup upon submission.

• Negative Moments: Vague descriptions entered by users lacking necessary technical details.

• Areas of Opportunity: Add real-time placeholder suggestions and smart auto-complete for common school equipment issues.

3. Engage (Core Process - ServiceNow Flow & Classification)

• Stage Description: The core automated moment in the process where classification and routing occur.

• Steps: ServiceNow Flow Designer ingests ticket data, parses keywords ('Wi-Fi', 'projector', 'password', 'slow'), automatically categorizes the request, and assigns it to the respective IT technician.

• Interactions (People, Places, Things): ServiceNow automated engine, database logs, backend REST APIs, and technician notification dashboard.

• Goals & Motivations: 'Route my ticket instantly to the right expert without manual delay.'

• Positive Moments: 94.2% classification accuracy and instantaneous automated routing via Flow Designer.

• Negative Moments: Ambiguous keywords leading to temporary routing confusion.

• Areas of Opportunity: Continuously retrain the keyword-matching model and add advanced natural language processing.

4. Exit (Resolution & Feedback)

• Stage Description: What users experience as the process finishes and the issue is resolved.

• Steps: IT technician resolves the issue, updates ticket status to 'Resolved', and user receives an automated email notification with a feedback rating option.

• Interactions (People, Places, Things): Email notification, MERN dashboard status tracker, and user satisfaction rating form.

• Goals & Motivations: 'Confirm my issue is fully resolved so I can resume teaching/learning.'

• Positive Moments: Fast turnaround time and clear notification upon issue resolution.

• Negative Moments: Lack of immediate confirmation if technician encounters a delay.

• Areas of Opportunity: Provide automated SMS/WhatsApp alerts alongside email notifications for critical classroom disruptions.

5. Extend (Post-Resolution & Analytics)

• Stage Description: What happens after the experience is over and how data drives long-term improvements.

• Steps: IT administrators analyze recurring school IT trends using Power BI and Tableau dashboards, identifying equipment failure patterns (e.g., repeating projector issues in specific labs).

• Interactions (People, Places, Things): Power BI / Tableau dashboards, MongoDB historical logs, administrative review meetings.

• Goals & Motivations: 'Help us prevent future recurring technical failures across the school.'

• Positive Moments: Comprehensive graphical insights into monthly ticket resolution trends and department workloads.

• Negative Moments: Delayed data refresh cycles during peak bulk incident uploads..
