Project Design Phase-II: Data Flow Diagrams & User Stories

Date:	30 September 2026
Team ID:	[SWTID-2026-3230]
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	4 Marks

---

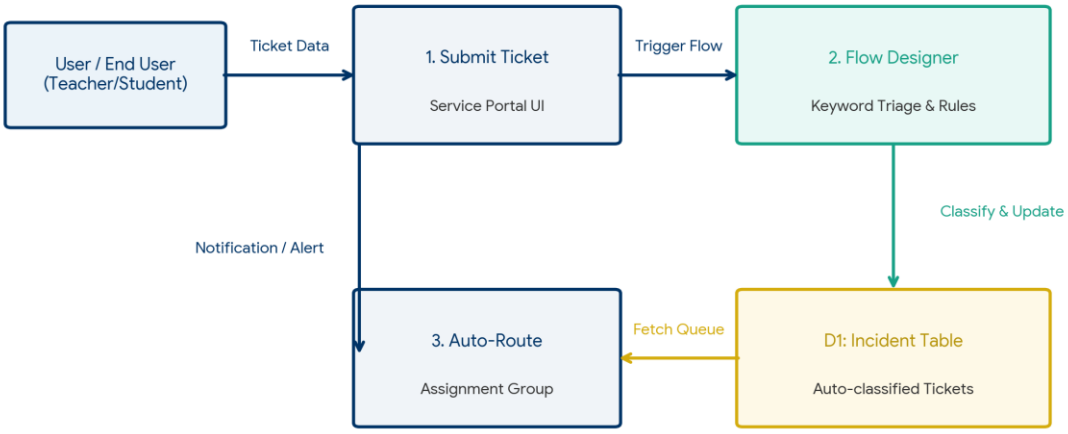

1. Data Flow Diagrams (DFD)

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

System Data Flow Visual Diagram

The following diagram illustrates the data flow for Auto Ticket Classification using Flow Designer:

Data Flow Diagram (DFD Level-1): Auto Ticket Classification using Flow Designer

Data Flow Description:

1. User submits an IT support ticket via the Service Portal with a short description and description.
2. The ServiceNow platform triggers the Flow Designer workflow upon record insertion.
3. Flow Designer evaluates text conditions and keywords (e.g., 'Wi-Fi', 'projector', 'password') to classify category, subcategory, and priority.
4. The ticket is updated in the Incident Database (D1) with the correct assignment group.
5. Customer Care Executive or respective IT technician receives instant notification and queue assignment.

2. User Stories

The following table lists the comprehensive user stories across all user types for the Auto Ticket Classification system:

User Type	Epic / Function	Story ID	User Story / Task	Acceptance Criteria	Priority / Release
Customer (End User)	Ticket Submission	USN-1	As a user, I can submit an IT support	Ticket is successfully created in the	High / Sprint-1

			ticket with a short description and details.	portal.	
Customer (End User)	Ticket Tracking	USN-2	As a user, I will receive an instant email notification once my ticket is logged and auto-classified.	Receives confirmation email with ticket number & category.	High / Sprint-1
Customer (End User)	Dashboard View	USN-3	As a user, I can view the status and assigned group of my submitted tickets on my dashboard.	Dashboard displays accurate ticket status and updates.	Medium / Sprint-2
Customer Care Executive	Queue Management	USN-4	As an executive, I can view pre-classified tickets routed automatically to my team's queue.	Tickets appear in correct department queue without manual triage.	High / Sprint-1
Customer Care Executive	Manual Override	USN-5	As an executive, I can manually reclassify or update a ticket category if necessary.	System allows manual category adjustment with audit trail.	Low / Sprint-2
Administrator	Flow	USN-6	As an admin, I can configure	Flow Designer	High / Sprint-

	Configuration		and update classification rules and keywords in Flow Designer.	updates take effect on new ticket submissions.	1
Administrator	Audit & Reporting	USN-7	As an admin, I can view analytics on auto-classification accuracy and ticket resolution times.	Reports show classification success rate and bottlenecks.	Medium / Sprint-2
